1) M1 chart, RSI indicator (default 14 period), level set 16 and 84
Strategy: SELL when hit level 84, BUY when hit level 16.
TP and SL $5 (50 pips) and TP and SL $10 (100pips), same strategy but different TP SL.

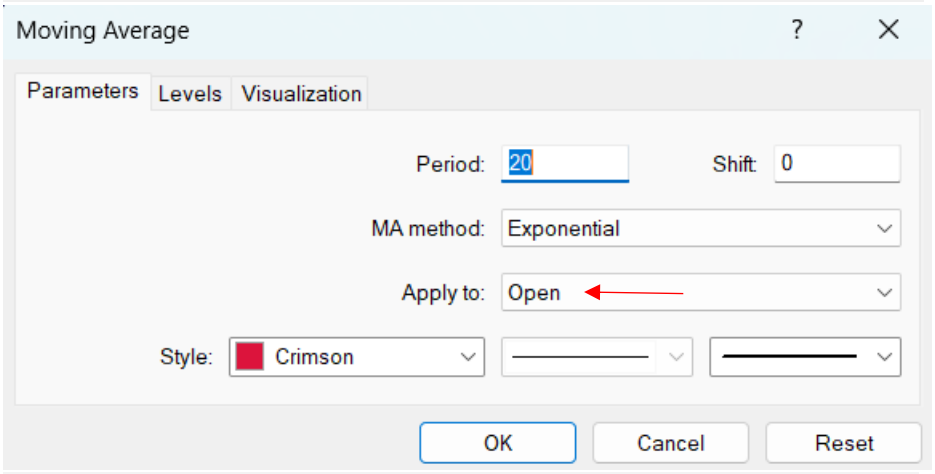

If TP, no second trades. Cool down period 1 hour.
If SL, open second trades with same TP SL provided M1 still above level 82 / below 16.

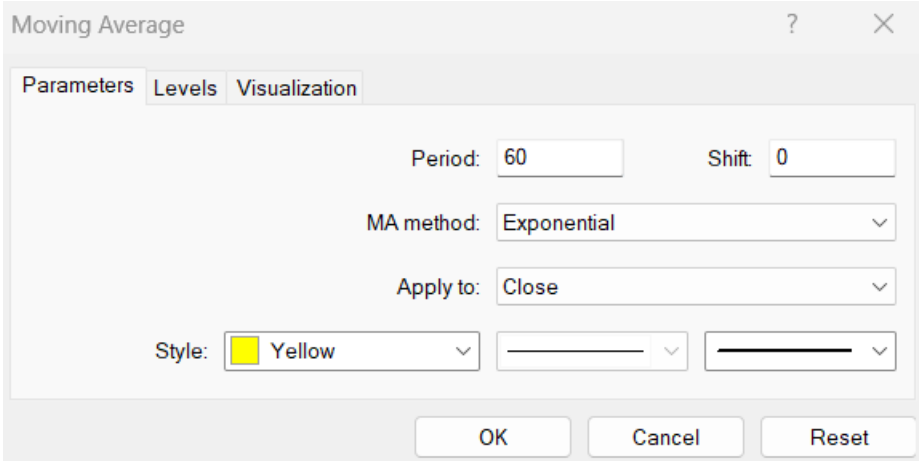

2) H4 chart, EMA (exponential moving average indicator, TP and SL $25 (2500 pips)
Strategy: BUY LIMIT/ SELL LIMIT (buy at lower / sell at higher theory, wait for price to come and hit better price)
Blue and Red lines determine trend, if both line cross then INVALID.
If both lines showing trend (blue below red, DOWNTREND, vice versa), then **FOCUS YELLOW LINE**, and put BUY LIMIT/ SELL LIMIT $13 (1300 pips away)

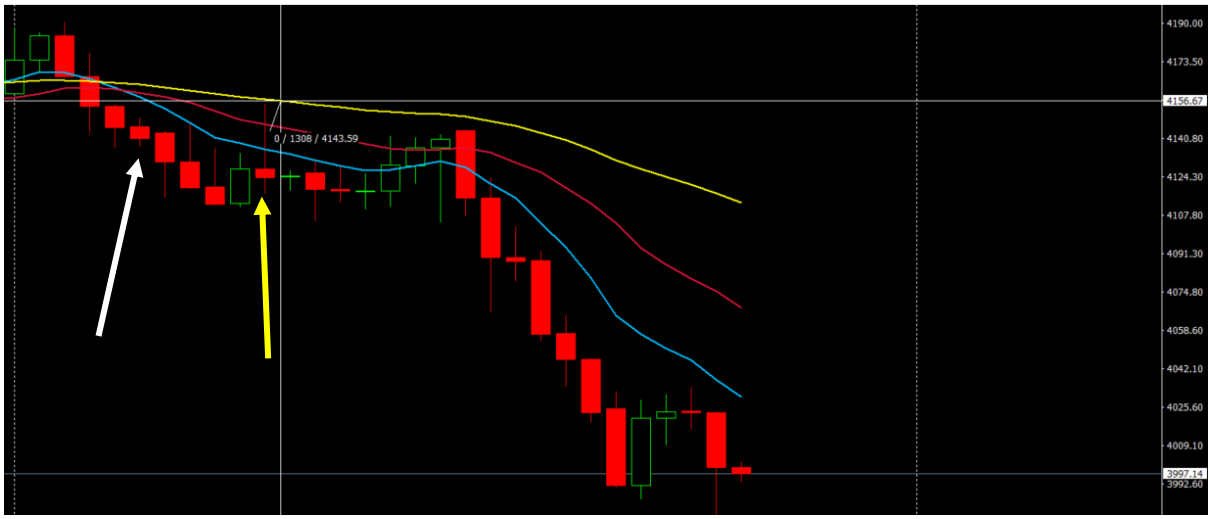

Then H4 chart will be as per below:
(zoom out and zoom in version)

4662.45

Example:

H4

Base on this week 19/10 – 23/10 H4 chart, downtrend is confirmed base on EMA, a trade (SELL LIMIT) will be placed on WHITE ARROW area, and then it only triggered (yellow arrow) after more than 24 hours. The sell limit should be placed around price SELL LIMIT: 4143.50 and BUY/SELL LIMIT should only be placed $13 away from YELLOW LINE
